Angle Valve

electromagnetically actuated with automatic voltage adaptation 90 … 264 V

AVC 016 MA/X
AVC 025 MA/X
AVC 040 MA/X

Operating Instructions
Incl. Manufacturer's Declaration
Product Identification

In all communications with PfeifferVacuum, please specify the information given on the product nameplate. For convenient reference copy that information into the space provided below.

Validity

This document applies to products with the following part numbers:

- PF A34 506  (DN 16 ISO-KF, aluminum housing)
- PF A34 536  (DN 16 ISO-KF, stainless steel housing)
- PF A44 506  (DN 25 ISO-KF, aluminum housing)
- PF A44 536  (DN 25 ISO-KF, stainless steel housing)
- PF A54 506  (DN 40 ISO-KF, aluminum housing)
- PF A54 536  (DN 40 ISO-KF, stainless steel housing)

The part number (No) can be taken from the product nameplate. If not indicated otherwise in the legends, the illustrations in this document correspond to the valve with the vacuum connection DN 40 ISO-KF. They apply to valves with other vacuum connections by analogy.

We reserve the right to make technical changes without prior notice.

All dimensions in mm.
Intended Use

The electromagnetically actuated bellows sealed angle valves are used as shut-off or venting devices in vacuum applications.

Functional Principle

The angle valves are opened electromagnetically and closed by means of a prestressed pressure spring. They close, or remain closed, on power loss.

Scope of Delivery

1 Description

1.1 Operating modes

The angle valve has two operating modes:

- REMOTE mode
  Drive via control voltage 15 … 30 VDC.

- LOCAL mode
  Drive via supply voltage 90 … 264 VAC.

The operating mode is selected by setting a switch (→ figure 17).

REMOTE mode

In the REMOTE mode, the supply voltage of 90 … 264 VAC is constantly fed. The angle valve is opened and closed via the control contact (0 VDC).
LOCAL mode

The angle valve is opened and closed directly via the supply voltage.

1.2 Indication of Positions and Faults

Green LED lit = valve open
Red LED lit = valve closed
Red LED flashing = fault
1.3 Position Indicator  
(in REMOTE mode only)

The integrated position indicator allows for polling the valve positions. In the event of a fault, the signal "valve closed" is constantly fed.
2 Safety

2.1 Symbols Used

DANGER

Information on preventing any kind of physical injury.

WARNING

Information on preventing extensive equipment and environmental damage.

Caution

Information on correct handling or use. Disregard can lead to malfunctions or minor equipment damage.

Notice

2.2 Personnel Qualifications

Skilled personnel

All work described in this document may only be carried out by persons who have suitable technical training and the necessary experience or who have been instructed by the end-user of the product.
2.3 General Safety Instructions

- Adhere to the applicable regulations and take the necessary precautions for the process media used. Consider possible reactions with the product materials (→ § 11).
- Adhere to the applicable regulations and take the necessary precautions for all work you are going to do and consider the safety instructions in this document.
- Before beginning to work, find out whether any vacuum components are contaminated. Adhere to the relevant regulations and take the necessary precautions when handling contaminated parts.

Communicate the safety instructions to all other users.

2.4 Liability and Warranty

Pfeiffer Vacuum assumes no liability and the warranty becomes null and void if the end-user or third parties

- disregard the information in this document
- use the product in a non-conforming manner
- make any kind of interventions (modifications, alterations etc.) on the product
- use the product with accessories not listed in the product documentation.

The end-user assumes the responsibility in conjunction with the process media used.

**Stainless steel-housing**
4 Installation

4.1 Vacuum Connection

**DANGER**

DANGER: overpressure in the vacuum system >1 bar

Injury caused by released parts and harm caused by escaping process gases can result if clamps are opened while the vacuum system is pressurized.

Do not open any clamps while the vacuum system is pressurized. Use the type clamps which are suited to overpressure.

**Caution**

Caution: vacuum component

Dirt and damages impair the function of the vacuum component.

When handling vacuum components, take appropriate measures to ensure cleanliness and prevent damages.

**Caution**

Caution: dirt sensitive area

Touching the product or parts thereof with bare hands increases the desorption rate.

Always wear clean, lint-free gloves and use clean tools when working in this area.
Remove the protective lids and connect the product to the vacuum system.

- Seal with centering ring
- ISO-KF connection flange
- Clamp
- Protective lid

Keep the protective lids.
4.2 Power Connection

**DANGER**

DANGER: mains voltage

Products that are not professionally connected to ground can be hazardous in the event of a malfunction.

Connect the product according to the local regulations and ground it correctly.

**Caution**

Caution: electrostatic fields

If the valve is installed in the vicinity of switched or electronically controlled heavy electric loads, such as furnaces, heaters, motors or RF generators, disturbances may occur.

Install a mains filter in the supply line of the valve.

**Caution**

Caution: high voltage tests

The valve is factory tested according to the EN 60 204 standard. Additional high voltage tests may destroy the valve.

Do not carry out any further high voltage tests.
Unscrew the hexagon socket head screws and remove the cover.

- DN 16: AF 2.5
- DN 25: AF 3
- DN 40: AF 3
The operating mode must be selected before the electrical connection is established. If a 15 ... 30 VDC control voltage is available, choose REMOTE.
Prepare the connector for the feeder line, mount the cable tie …

**DANGER**

DANGER: moving parts

When the product is connected to the supply media, parts can start moving. Moving parts can catch parts of the body and cause injuries.

The connection to the power supply may only be established if

- the power supply is de-energized
- the product is installed in a vacuum system or
- the moving parts are protected to avoid accidental contact.

The cable must meet the following specifications:

- flexible
- conductor cross-section \( \leq 1 \text{ mm}^2 \)
- appropriate for 230 V basic insulation
- 3 poles protective conductor (P+N+PE)
- 5 … 7 mm diameter

(for the cable feedthroughs to meet the IP 54 specifications)
The connection to the valve must be fuse-protected with $\leq 16$ A.

... and plug in the connector.
Prepare the connector for the control cable (for REMOTE mode only), mount the cable tie …

**DANGER**

**DANGER: moving parts**

When the product is connected to the supply media, parts can start moving. Moving parts can catch parts of the body and cause injuries.

The connection to the control cable may only be established if

- the power supply/ control cable is de-energized
- the product is installed in a vacuum system or
- the moving parts are protected to avoid accidental contact.

The cable must meet the following specifications:

- flexible
- conductor cross-section $<0.75 \text{ mm}^2$
- appropriate for 230 V basic insulation
- 4 poles protective conductor
- 5 … 7 mm diameter
  (for the cable feedthroughs to meet the IP 54 specifications)
... and plug in the connector.

5 Mount the cover.

DN 16: AF 2.5
DN 25: AF 3
DN 40: AF 3
5 Operation

The product is ready for operation as soon as it has been installed.

6 Deinstallation

Precondition
• Vacuum system vented.

6.1 Power Connection

DANGER: moving parts
When the product is disconnected from the supply media, parts can start moving. Moving parts can catch parts of the body and cause injuries.

The product may only be disconnected from the power supply if
• the product is installed in a vacuum system or
• the moving parts are protected to avoid accidental contact.
DANGER: mains voltage
Touching live parts is hazardous.
Switch all mains and control voltage sources off and secure them against inadvertent power-on before performing any electrical work on the product.

1. Remove the cover (→ 16).

2. Disconnect the feeder line.
3 Deinstall the strain relief.

4 Mount the cover (→ 22).
6.2 Vacuum Connection

DANGER

DANGER: contaminated parts
Contaminated parts can be detrimental to health and environment.
Before beginning to work, find out whether any parts are contaminated. Adhere to the relevant regulations and take the necessary precautions when handling contaminated parts.

Caution

Caution: vacuum component
Dirt and damages impair the function of the vacuum component.
When handling vacuum components, take appropriate measures to ensure cleanliness and prevent damages.

Caution

Caution: dirt sensitive area
Touching the product or parts thereof with bare hands increases the desorption rate.
Always wear clean, lint-free gloves and use clean tools when working in this area.
Remove the valve from the vacuum system and install the protective lids.
7  Maintenance / Repair

7.1 Replacing/Cleaning the O-rings and Bellows

Precondition

- The valve has been deinstalled (Deinstallation → 24)

1. Remove the cap screws and the cover.

- DN 16: AF 2.5
- DN 25: AF 3
- DN 40: AF 3
Remove the cap screws and the actuator from the housing.

The actuator can be rotated by 90°.

When reinstalling the actuator tighten the cap screws evenly and crosswise.

Actuator

Housing

DN 16: AF 2.5
DN 25: AF 3
DN 40: AF 3
3 Unscrew the bellows (Spare Parts → § 39).

4 Remove the seals (Spare Parts → § 39).

</tr>
</tbody>
</table>
5 Remove the protective lids and clean the parts.

### DANGER

DANGER: cleaning agents
Cleaning agents can be detrimental to health and environment.
Adhere to the relevant regulations and take the necessary precautions when handling and disposing of cleaning agents. Consider possible reactions with the product materials (→ 11).

### Procedure

- Carefully clean the parts with a grease solving, non-scouring cleaner.
- After cleaning the parts should preferably be rinsed with alcohol and subsequently heated to ≈50° C in an oven or with an industrial blower.
- Carefully clean the sealing surfaces with a lint-free cloth soaked with alcohol. Allow them to dry.

6 Proceed in reverse order to reassemble the product.

Be careful to insert the O-rings level into the grooves without twisting them.
After reassembly, a few switching cycles should be performed in order for the O-rings to perfectly adapt to the sealing surfaces. Take the necessary precautions for this procedure.
7.2 Replacing the Electronics and the Stroke Solenoid

Preconditions
- Valve deinstalled (→ 24)
- Actuator removed from the housing (→ 30, 1 und 2)

1 Remove the ground conductor and the position indicator.

DN 16: AF 7

DN 25 and DN 40: AF 2.5

Ground conductor

Position indicator

DN 16: Be careful to correctly position the cables
2. Remove the ground conductor, unsolder the red and the blue wire of the electronics (Spare Parts → 39).

- Ground conductor
- Soldering iron
- Do not inhale the vapors
3 Unscrew the screws …
… and remove the stroke solenoid (Spare Parts → § 39).

Mount the stroke solenoid in this position

Leak detection opening
4 Remove the position indicator.

**Warning:** The photoelectric barrier must not be dirty.
**Warning:** Be careful to correctly position the position indicator.

5 Proceed in reverse order to reassemble the electronics and the stroke solenoid.

9 Returning the Product

**WARNING**

WARNING: forwarding contaminated products

Contaminated products (e.g. radioactive, toxic, caustic or microbiological hazard) can be detrimental to health and environment.

Products returned to Pfeiffer Vacuum should preferably be free of harmful substances. Adhere to the forwarding regulations of all involved countries and forwarding companies and enclose a duly completed declaration of contamination.

Products that are not clearly declared as "free of harmful substances" are decontaminated at the expense of the customer. Products not accompanied by a duly completed declaration of contamination are returned to the sender at his own expense.
10 Disposal

**DANGER**
DANGER: contaminated parts
Contaminated parts can be detrimental to health and environment.
Before beginning to work, find out whether any parts are contaminated. Adhere to the relevant regulations and take the necessary precautions when handling contaminated parts.

**WARNING**
WARNING: substances detrimental to the environment
Products or parts thereof (mechanical and electric components, operating fluids etc.) can be detrimental to the environment.
Dispose of such substances in accordance with the relevant local regulations.

**Separating the components**
After disassembling the product, separate its components according to the following criteria:

- Contaminated components
  Contaminated components (radioactive, toxic, caustic or biological hazard etc.) must be decontaminated in accordance with the relevant national regulations, separated according to their materials, and disposed of.

- Other components
  Such components must be separated according to their materials and recycled.
Declaration of Contamination

The service, repair, and/or disposal of vacuum equipment and components will only be carried out if a correctly completed declaration has been submitted. Non-completion will result in delay.

This declaration may only be completed (in block letters) and signed by authorized and qualified staff.

Manufacturer's Declaration

as defined by the Directive relating to machinery 98/37/EC, Appendix IIB.

We, Pfeiffer Vacuum, hereby declare that putting the incomplete equipment mentioned below into operation is not permitted until evidence is given that the system into which that incomplete equipment shall be installed is in conformity with the provisions of the EC Directive relating to machinery.

We also declare that the equipment mentioned below complies with the provisions of the Directive relating to electrical equipment designed for use within certain voltage limits 2006/95/EC and the Directive relating to electromagnetic compatibility 2004/104/EC.

Products

Angle Valve
electromagnetically actuated with automatic voltage adaptation 90 ... 264 V

Part numbers
PF A34 506   PF A44 506   PF A54 506
PF A34 536   PF A44 536   PF A54 536

Standards
Harmonized and international/national standards and specifications:

- EN ISO 12100-1/-2  (Safety of machinery)
- EN 294  (Safety distances to prevent danger zones being reached by the upper limits)
- EN 349  (Minimum gaps to avoid crushing of parts of the human body)
• EN 61000-3-2 (EMC: Limits for harmonic current emissions)
• EN 61000-6-2 (EMC: generic immunity standard)
• EN 61000-6-3 (EMC: generic emission standard)
• EN 61010-1 (Safety requirements for electrical equipment for measurement, control and laboratory use)
