

SN54ABTE16245, SN74ABTE16245 16-BIT INCIDENT-WAVE SWITCHING BUS TRANSCEIVERS WITH 3-STATE OUTPUTS

SCBS226F – JULY 1993 – REVISED AUGUST 1996

- Support the VME64 ETL Specification
- Reduced, TTL-Compatible, Input Threshold Range
- High-Drive Outputs ($I_{OH} = -60$ mA, $I_{OL} = 90$ mA) Support 25- Ω Incident-Wave Switching
- V_{CCBIAS} Pin Minimizes Signal Distortion During Live Insertion
- Internal Pullup Resistor on \overline{OE} Keeps Outputs in High-Impedance State During Power Up or Power Down
- Members of the Texas Instruments (TI) *Widebus*™ Family
- State-of-the-Art *EPIC-II B*™ BiCMOS Design Significantly Reduces Power Dissipation
- Distributed V_{CC} and GND Pin Configuration Minimizes High-Speed Switching Noise
- 25- Ω Series Damping Resistor on B Port
- Bus Hold on Data Inputs Eliminates the Need for External Pullup Resistors
- Package Options Include Plastic 300-mil Shrink Small-Outline (DL) and Thin Shrink Small-Outline (DGG) Packages and 380-Mil Fine-Pitch Ceramic Flat (WD) Packages Using 25-mil Center-to-Center Spacings

SN54ABTE16245 . . . WD PACKAGE

(TOP VIEW)

description

The 'ABTE16245 are 16-bit (dual-octal) noninverting 3-state transceivers designed for synchronous two-way communication between data buses. The control-function implementation minimizes external timing requirements. These devices can be used as two 8-bit transceivers or one 16-bit transceiver. They allow data transmission from the A bus to the B bus or from the B bus to the A bus, depending on the logic level at the direction-control (DIR) input. The output-enable (\overline{OE}) input can be used to disable the device so that the buses are effectively isolated. When \overline{OE} is low, the device is active.

The B port has a 25- Ω series output resistor to reduce ringing. Active bus-hold inputs are also found on the B port to hold unused or floating inputs at a valid logic level.

The A port provides for the precharging of the outputs via V_{CCBIAS} , which establishes a voltage between 1.3 V and 1.7 V when V_{CC} is not connected.

The SN74ABTE16245 is available in TI's shrink small-outline package (DL), which provides twice the I/O pin count and functionality of standard small-outline packages in the same printed-circuit-board area.

The SN54ABTE16245 is characterized for operation over the full military temperature range of -55°C to 125°C . The SN74ABTE16245 is characterized for operation from -40°C to 85°C .

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

Widebus and EPIC-II B are trademarks of Texas Instruments Incorporated.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

16-BIT INCIDENT-WAVE SWITCHING BUS TRANSCEIVERS
WITH 3-STATE OUTPUTS

SCBS226F – JULY 1993 – REVISED AUGUST 1996

FUNCTION TABLE
 (each 8-bit section)

INPUTS		OPERATION
\overline{OE}	DIR	
L	L	A data to B bus
L	H	B data to A bus
H	X	Isolation

logic diagram (positive logic)

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage range, V_{CC}	-0.5 V to 7 V
Input voltage range, V_I (except I/O ports) (see Note 1)	-0.5 V to 7 V
Voltage range applied to any output in the high state or power-off state, V_O	-0.5 V to 5.5 V
Current into any output in the low state, I_O	128 mA
Input clamp current, I_{IK} ($V_I < 0$)	-18 mA
Output clamp current, I_{OK} ($V_O < 0$)	-50 mA
Maximum power dissipation at $T_A = 55^\circ\text{C}$ (in still air) (see Note 2): DGG package	0.85 W
DL package	1.2 W
Storage temperature range, T_{stg}	-65°C to 150°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES: 1. The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
 2. The maximum package power dissipation is calculated using a junction temperature of 150°C and a board trace length of 750 mils. For more information, refer to the *Package Thermal Considerations* application note in the *ABT Advanced BiCMOS Technology Data Book*.

SCBS226F – JULY 1993 – REVISED AUGUST 1996

PARAMETER MEASUREMENT INFORMATION

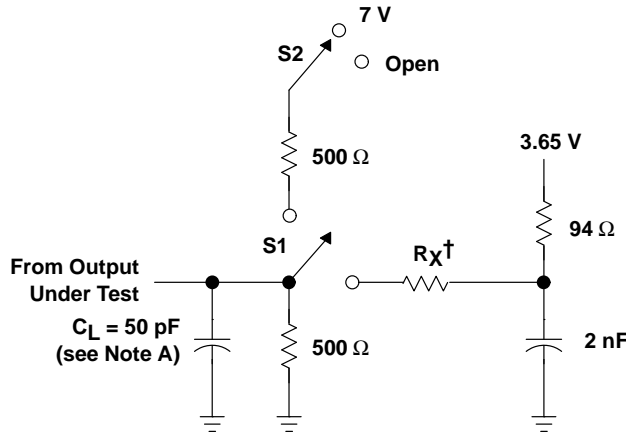

- NOTES:
- A. Pulse skew, $t_{sk(p)}$, is defined as the difference in propagation delay times t_{PLH1} and t_{PHL1} on the same terminal at identical operating conditions.
 - B. Output skew, $t_{sk(o)}$, is defined as the difference in propagation delay of the fastest and slowest paths on a single device that originate at either a single input or multiple simultaneously switched inputs (e.g., $|t_{PLH1} - t_{PLH2}|$).
 - C. Temperature skew, $t_{sk(temp)}$, is the output skew of two devices, both having the same value of $V_{CC} \pm 1\%$ and with package temperature differences of 20°C .
 - D. Load skew, $t_{sk(load)}$, is measured with R_X in Figure 2 at $13\ \Omega$ for one unit and $56\ \Omega$ for the other unit.

t_t (B port) (see Note F)	Up	Open

VOLTAGE WAVEFORMS
ENABLE AND DISABLE TIMES

- NOTES: A. C_L includes probe and jig capacitance.
 B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
 C. All input pulses are supplied by generators having the following characteristics: $PRR \leq 10 \text{ MHz}$, $Z_O = 50 \Omega$, $t_r \leq 2.5 \text{ ns}$, $t_f \leq 2.5 \text{ ns}$.
 D. The outputs are measured one at a time with one transition per measurement.
 E. t_t is measured between 1 V and 2 V of the output waveform.
 F. t_t is measured between 10% and 90% of the output waveform.

IMPORTANT NOTICE

Texas Instruments (TI) reserves the right to make changes to its products or to discontinue any semiconductor product or service without notice, and advises its customers to obtain the latest version of relevant information to verify, before placing orders, that the information being relied on is current.

TI warrants performance of its semiconductor products and related software to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Certain applications using semiconductor products may involve potential risks of death, personal injury, or severe property or environmental damage ("Critical Applications").

TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, INTENDED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT APPLICATIONS, DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS.

Inclusion of TI products in such applications is understood to be fully at the risk of the customer. Use of TI products in such applications requires the written approval of an appropriate TI officer. Questions concerning potential risk applications should be directed to TI through a local SC sales office.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards should be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein. Nor does TI warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used.
